"I think there's a misconception among the general public that, to live eco-friendly, you have to sacrifice - you have outdoor plumbing, you're living on burlap, nothing is comfortable, but that's not the truth. We show how you can combine elegance and living responsibly without sacrificing."

- Bryan C., Client

Project Highlights

2,400 SF BEACH HOUSE
PASSIVE SOLAR DESIGN &
HIGH-PERFORMANCE EXTERIOR SHELL

Owned by actor Bryan Cranston, this LEED Platinum oceanfront home is a "passion project promoting the philosophy of green living and the green lifestyle." The home is 56 percent more energy-efficient than California Energy Code standards due to its passive solar design and high-performance exterior shell. A 5.12-kilowatt photo-voltaic system provides for the home's electrical needs, while a solar hydroponic system preheats water for domestic water and radiant space needs. In the garage, an array of smart home technology lives alongside a BendPak auto lift.
