Project Highlights

3,560 SF MAIN HOME
 884 SF STABLES

This 3,560 square foot home was remodeled and expanded with "aging in place" in mind. The home's footprint was expanded, taking over what was the garage, to create additional living space on the main level. Two new garages were added with a gated driveway between them and a gently sloping, covered breezeway for easy access to the side entrance.

The existing home was updated and carefully reconfigured to accommodate the homeowner's entertainment needs as well as special pieces of art and furniture. Care was taken to preserve some of the beautiful design features of the original home while enhancing the ocean views.

Outside, the ocean view patio was upgraded with a stone fireplace and additional seating for entertaining.
